

**BONDABLE ORTHODONTIC APPLIANCE
WITH A POLYMER RESIN BONDING BASE**

Abstract

An orthodontic appliance of the bracket or tube type for bondable mounting on a tooth including an appliance body having a buccal/labial archwire receiving side and a lingual side and a polymer resin bonding base molded to the lingual side such that at least part of the body is embedded in the base, and wherein the base may include openings for receiving an auxiliary or a secondary archwire.
